**Summary:**

The least costly alternative for independent functional mobility was found to be:

☐ Crutch/Cane ☐ Walker ☐ Manual w/c ☐ Manual w/c with power assist ☐ Scooter ☐ Power w/c std joystick ☐ Power w/c alternative control  
☐ Requires **dependent care** mobility device

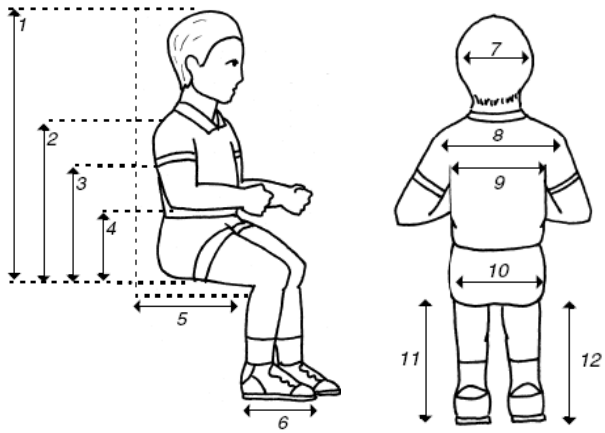

**Functional Processing Skills for Wheeled Mobility**Processing skills are adequate for safe mobility equipment operation ☐ Yes ☐ NoPatient is willing and motivated to use recommended mobility equipment ☐ Yes ☐ No☐ Patient is **unable** to safely operate mobility equipment independently and requires **dependent care** equipment

**SENSATION and SKIN ISSUES:**

**Sensation** ☐ Intact ☐ Impaired ☐ Absent ☐ Hyposensate ☐ Hypersensate ☐ Defensiveness

Location(s) of impairment:

**Pressure Relief Method(s):** ☐ Lean side to side to offload (without risk of falling) ☐ W/C push up (4+ times/hour for 15+ seconds)  
☐ Stand up (without risk of falling) ☐ Other:

Effective pressure relief method(s) above can be performed consistently throughout the day: ☐ Yes ☐ No

If not, Why? \_\_\_\_\_

**Pressure Map Results:** The above method(s) provided effective pressure relief - ☐ Yes ☐ No

**Skin Issues/Skin Integrity**

Current skin Issues ☐ Yes ☐ No  
☐ Intact ☐ Red area ☐ Open area  
☐ Scar tissue ☐ At risk from prolonged sitting  
 Where \_\_\_\_\_

History of Skin Issues ☐ Yes ☐ No  
 Where \_\_\_\_\_  
 When \_\_\_\_\_  
 Stage \_\_\_\_\_

Hx of skin flap surgeries ☐ Yes ☐ No  
 Where \_\_\_\_\_  
 When \_\_\_\_\_

**Pain:** ☐ Yes ☐ No Location(s): \_\_\_\_\_ Intensity scale: (0-10) \_\_\_\_\_

How does pain interfere with mobility and/or MRADLs? -

## Braden Scale For Predicting Pressure Sore Risk ©

Risk Factor	Score/Description				Score
<b>SENSORY PERCEPTION</b>  Ability to respond meaningfully to pressure-related discomfort	<input type="checkbox"/> <b>1. COMPLETELY LIMITED</b> Unresponsive (does not moan, flinch, or grasp) to painful stimuli, due to diminished level of consciousness or sedation,  <b>OR</b> limited ability to feel pain over most of body surface	<input type="checkbox"/> <b>2. VERY LIMITED –</b> Responds only to painful stimuli. Cannot communicate discomfort except by moaning or restlessness, <b>OR</b> has a sensory impairment which limits the ability to feel pain or discomfort over ½ of body.	<input type="checkbox"/> <b>3. SLIGHTLY LIMITED –</b> Responds to verbal commands but cannot always communicate discomfort or need to be turned, <b>OR</b> has some sensory impairment which limits ability to feel pain or discomfort in 1 or 2 extremities.	<input type="checkbox"/> <b>4. NO IMPAIRMENT –</b> Responds to verbal commands. Has no sensory deficit which would limit ability to feel or voice pain or discomfort.	
<b>MOISTURE</b>  Degree to which skin is exposed to moisture	<input type="checkbox"/> <b>1. CONSTANTLY MOIST</b> – Skin is kept moist almost constantly by perspiration, urine, etc. Dampness is detected every time patient is moved or turned.	<input type="checkbox"/> <b>2. OFTEN MOIST</b> – Skin is often but not always moist. Linen must be changed at least once a shift.	<input type="checkbox"/> <b>3. OCCASIONALLY MOIST</b> – Skin is occasionally moist, requiring an extra linen change approximately once a day.	<input type="checkbox"/> <b>4. RARELY MOIST</b> – Skin is usually dry; linen only requires changing at routine intervals.	
<b>ACTIVITY</b>  Degree of physical activity	<input type="checkbox"/> <b>1. BEDFAST</b> – Confined to bed	<input type="checkbox"/> <b>2. CHAIRFAST</b> – Ability to walk severely limited or nonexistent. Cannot bear own weight and/or must be assisted into chair or wheelchair	<input type="checkbox"/> <b>3. WALKS OCCASIONALLY</b> – Walks occasionally during day, but for very short distances, with or without assistance. Spends majority of each shift in bed or chair.	<input type="checkbox"/> <b>4. WALKS FREQUENTLY</b> – Walks outside the room at least twice a day and inside room at least once every 2 hours during waking hours.	
<b>MOBILITY</b>  Ability to change and control body position	<input type="checkbox"/> <b>1. COMPLETELY IMMOBILE</b> – Does not make even slight changes in body or extremity position without assistance.	<input type="checkbox"/> <b>2. VERY LIMITED –</b> Makes occasional slight changes in body or extremity position but unable to make frequent or significant changes independently	<input type="checkbox"/> <b>3. SLIGHTLY LIMITED</b> – Makes frequent though slight changes in body or extremity position independently	<input type="checkbox"/> <b>4. NO LIMITATIONS</b> – Makes major and frequent changes in position without assistance.	
<b>NUTRITION</b>  Usual food intake pattern 1NPO: Nothing by mouth. 2IV: Intravenously. 3TPN: Total parenteral nutrition.	<input type="checkbox"/> <b>1. VERY POOR</b> – Never eats a complete meal. Rarely eats more than 1/3 of any food offered. Eats 2 servings or less of protein (meat or dairy products) per day. Takes fluids poorly. Does not take a liquid dietary supplement,  <b>OR</b> is NPO1 and/or maintained on clear liquids or IV2 for more than 5 days	<input type="checkbox"/> <b>2. PROBABLY INADEQUATE</b> – Rarely eats a complete meal and generally eats only about ½ of any food offered. Protein intake includes only 3 servings of meat or dairy products per day. Occasionally will take a dietary supplement  <b>OR</b> receives less than optimum amount of liquid diet or tube feeding.	<input type="checkbox"/> <b>3. ADEQUATE</b> – Eats over half of most meals. Eats a total of 4 servings of protein (meat, dairy products) each day. Occasionally refuses a meal, but will usually take a supplement if offered,  <b>OR</b> is on a tube feeding or TPN3 regimen, which probably meets most of nutritional needs.	<input type="checkbox"/> <b>4. EXCELLENT</b> – Eats most of every meal. Never refuses a meal. Usually eats a total of 4 or more servings of meat and dairy products. Occasionally eats between meals. Does not require supplementation.	
<b>FRICITION AND SHEAR</b>	<input type="checkbox"/> <b>1. PROBLEM</b> - Requires moderate to maximum assistance in moving. Complete lifting without sliding against sheets is impossible. Frequently slides down in bed or chair, requiring frequent repositioning with maximum assistance. Spasticity, contractures, or agitation leads to almost constant friction.	<input type="checkbox"/> <b>2. POTENTIAL PROBLEM</b> – Moves feebly or requires minimum assistance. During a move, skin probably slides to some extent against sheets, chair, restraints, or other devices. Maintains relatively good position in chair or bed most of the time but occasionally slides down.	<input type="checkbox"/> <b>3. NO APPARENT PROBLEM</b> – Moves in bed and in chair independently and has sufficient muscle strength to lift up completely during move. Maintains good position in bed or chair at all times.

Name:

MR#:

☐ **Ultralightweight manual wheelchair K0005**

Arm: ☐ both ☐ right ☐ left

Foot: ☐ both ☐ right ☐ left ☐ hemi height required  
☐ heavy duty

Front seat to floor \_\_\_\_\_ inches

Rear seat to floor \_\_\_\_\_ inches

Back height \_\_\_\_\_ inches Back angle \_\_\_\_\_ degrees

Front angle \_\_\_\_\_ degrees

- ☐ full-time manual wheelchair user
- ☐ Requires individualized fitting and optimal adjustments for multiple features that include adjustable axle configuration, fully adjustable center of gravity, wheel camber, seat and back angle, angle of seat slope, which cannot be accommodated by a K0001 through K0004 manual wheelchair
- ☐ prevent repetitive use injuries
- ☐ daily use \_\_\_\_\_ hours
- ☐

- ☐ user has high activity patterns that frequently require them to go out into the community for the purpose of independently accomplishing high level MRADL activities. Examples of these might include a combination of; shopping, work, school, banking, childcare, independently loading and unloading from a vehicle etc.
- ☐ lower seat height required to foot propel
- ☐ short stature
- ☐ heavy duty - weight over 250lbs

☐ **Current chair is a K0005** manufacture: \_\_\_\_\_ model: \_\_\_\_\_ serial# \_\_\_\_\_ age: \_\_\_\_\_

☐ First time K0005 user (complete trial)

K0004 time and # of strokes to propel 30 feet: \_\_\_\_\_ seconds \_\_\_\_\_ strokes

K0005 time and # of strokes to propel 30 feet: \_\_\_\_\_ seconds \_\_\_\_\_ strokes

What was the result of the trial between the K0004 and K0005 manual wheelchair? \_\_\_\_\_

What features of the K0005 w/c are needed as compared to the K0004 base? Why? \_\_\_\_\_

- ☐ adjustable seat and back angle changes the angle of seat slope of the frame to attain a gravity assisted position for efficient propulsion and proper weight distribution along the frame
- ☐ the front of the wheelchair will be configured higher than the back of the chair to allow gravity to assist the user with postural stability
- ☐ the center of the wheel will be positioned for stability, safety and efficient propulsion
- ☐ adjustable axle allows for vertical, horizontal, camber and overall width changes throughout the wheels for adjustment of the client's exact needs and abilities.
- ☐ adjustable axle increases the stability and function of the chair allowing for adjustment of the center of gravity.
- ☐ accommodates the client's anatomical position in the chair maximizing independence in mobility and maneuverability in all environments.
- ☐ create a minimal fixed tilt-in space to assist in positioning.

Describe users full-time manual wheelchair activity patterns: \_\_\_\_\_
